Large n: quality vs time, degree + random weights (a curve starts once every instance has a solution)
n = 500
n = 1000
n = 2000
n = 5000
mean gap to best-known (%)
wall-clock time (s), log
Proposed (guided restarts)
random-prior restarts
plain restarts
Proposed (best-of-k) + LS
Proposed + RR + LS
Greedy + RR + LS
LP rounding+RR+LS
